Latvia's green energy development - at what expense?

Abstract

In 2019 The European Union member countries made a pact that they will become climate-neutral by the year 2050. The study aims to analyze the assessment of the World Energy Council's Trilemma Sustainability Index to compare Latvia with other EU member states. The study contains the following research methods: analysis of publications, strategic documents of the Republic of Latvia. The authors have concluded that the sustainability of the Latvian energy sector is based on historical achievements.
